

Do you really know how your storage is performing?

Exploding data growth, increases in random IO, and the need for more efficient storage management is causing IT professionals to search for effective ways to control their storage. Eagle's Storage Assessment services provides an easy to understand evaluation of your data's performance, usage patterns, and growth. We use tools that gather information such as the rate of growth, IOPS, read/write ratios, block size, file ages and file types. Through our analysis of these performance, capacity, and inventory metrics, our engineers can help you make improvements that reduce costs, shorten backup and recovery times and accelerate performance and operational efficiency.

Eagle Storage Assessment Services

- Leverage Eagle Recon to accurately analyze environment storage activity, total amount of data and types of computing specific to your datacenter
- Provide a view into of the health of your storage systems
- Provide an inventory of storage servers and arrays
- Measures Total Cost of Ownership (TCO) and Return On Investment (ROI)
- Identifies potential points of failure
- Is performed with no downtime to your storage systems

Documentation and Deliverables Provided

- Generate a detailed report of individual systems in a meaningful format
- Provide recommendations for storage systems to improve performance, availability and management of environment
- Propose solutions and environment re-design to optimize your storage resources and performance
- Assist with planning for future growth

An Eagle Storage Assessment ensures that you've identified and resolved problems in your storage environment. The assessment equips us with right data to integrate a more efficient storage solution that best fits your business needs and budget. The result is an optimized storage environment that adds increased business value to your organization.
