

Cloud Data Protection from Eagle Technologies and Kansas Bankers Technologies

The banking industry requires a unique computing environment that serves the specific needs of business function while fulfilling the strict regulatory requirements of the industry. Backup and Recovery is a critical component of a sound Information Security Program. Cloud Data Protection provides banks with a proven, resilient backup platform, to meet all the specific requirements necessary to satisfy both state and federal regulators. Backup management, monitoring, reporting, and vendor due diligence are all encompassed in our product, ensuring data security as well as peace of mind during exams.

Our solutions and services offer the following advantages:

Secure and reliable data protection: powered by Commvault, the industry leader in data protection, our solution provides customers with an unmatched list of features and capabilities.

Reliable offsite backups: WAN replication built in to our solution, improves network bandwidth and storage resource consumption. In the event of a network interruption, backup copy jobs automatically resume from where they left off once connectivity is restored.

Hardware flexibility: customers can leverage their local infrastructure or utilize an Eagle-built validated backup appliance.

Management flexibility: allows customers to retain management of backups or leverage a fully managed solution with Eagle and KBT.

Remote backup seeding: Eagle provides seeding services to expedite the initial backup when datasets sets are large and network bandwidth is limited.

Built-in support: Eagle will provide technical support and all hardware and professional services related to the initial setup and ongoing maintenance of the solution.

Why Eagle and KBT?

Both Eagle Technologies and KBT are Kansas-based businesses with extensive experience in data management and data protection strategies for the banking industry.

Sales and technical support comes from team members located in the Salina, KS or Lenexa, KS facilities.

There's value in knowing where your data resides "in the cloud". Eagle's cloud data center is located at Cavern Technologies in Lenexa, Kansas. This state of the art facility is built 125 feet underground in a secure, compliant and purpose built datacenter site.

Annual restore tests for compliance purposes are included as part of the solution.

Complete vendor due diligence information including datacenter SSAE16 audit reports are included and provided on an annual basis.
