

Eagle Managed Services DPS Backup as a Service

Eagle DPS Backup as a Service

Protecting data assets is a daunting task for today's IT organizations. Unprecedented data growth and complex IT environments have led to significant business challenges, and many companies struggle to protect and secure their data. As a result, many organizations rely on a patchwork of solutions to meet their data protection needs. With **Eagle DPS Backup as a Service**, we're solving these data protection challenges for our customers.

It's all about the data

At Eagle we understand that data is your most valuable business asset. Protection of that valuable data is key. With **Eagle DPS Backup as a Service**, we leverage our industry experience - nearly four decades of protecting company's data assets -- with our managed service solution that aligns with the business value of your data. Eagle DPS BaaS is uniquely designed to protect:

ANY Data: any data set, application, hypervisor or OS

ANY Time: guaranteed availability dependent on customer RTO, RPO and SLA's

ANY Where: regardless of where data lives – on premises, hybrid cloud or public cloud

Eagle DPS BaaS eliminates the complexity of protecting data assets. Designed to support customers' most common data protection challenges, our worry-free, managed and monitored appliance-based solution can also replicate your data into Eagle's secure cloud datacenter or to a public cloud provider of your choice.
