

CYBER AWARENESS TIPS

 KEEPING THE BAD ACTORS OUT

01 PHISHING AWARENESS TRAINING

Targeted emails, or spear phishing, is reported by businesses to be used in 91% of successful data breaches. Awareness training will drastically reduce your risk of a cyber event.

UTILIZE A NEXT GENERATION FIREWALL

02

A next gen firewall provides deep-packet inspection that moves beyond port/protocol inspection and blocking to add application-level inspection, intrusion prevention, and bringing intelligence from outside the firewall

03 MFA FOR ALL ACCOUNTS

Utilize MFA for all accounts, especially accounts with elevated access like domain admins & global admins for Office 365. Protect the entry points into your environment, i.e. VPN, VDI, and SaaS applications.

EMAIL SECURITY

04

A robust email security platform will provide spam filtering, virus and malware blocking, phishing protection and admin controls and reporting for your organization. Pairing this with awareness training will boost any organizations ability to prevent cyber attacks.

05 BLACK BOX PENETRATION TESTING

The best way to know your gaps is to continually test your organization's defenses. Eagle's black box penetration testing is thorough and will provide you with a detailed analysis of where your gaps are

But WAIT.... there's more

During cybersecurity month in October, take action to minimize your cybersecurity risk:

- Schedule a **free security posture discussion** with an Eagle engineer
- Join our October 28th **cybersecurity webinar**
